

UK first as RISO returns to The Print Show

Inkjet printer manufacturer and pioneer RISO is to set to make a headlining return to The Print Show, bringing with it a next-generation printer that has not been seen before in the UK.

RISO is known around the world for its commitment to developing new products and delivering solutions for business needs today and in the future.

The leadership team at RISO's UK headquarters, in Elstree, Hertfordshire has confirmed the company will be in attendance at The Print Show, taking place in Telford, Shropshire in October.

Taking one of the largest stands available, RISO will be showcasing its unique ComColor technology, including the GD9630 and FW5230, and a duplicator, the ME9350.

The star of the show will be a new 320ppm (duplex) full-colour cut sheet inkjet printer that is being shown for the first time in the UK.

This inkjet printer is a production version of a concept model that was first displayed to great acclaim at drupa in Dusseldorf last year.

It's the latest in world-first technology from RISO's research and development teams, who are focused on consistently delivering inkjet solutions that take cutsheet printing to the next level.

Tatsuo Murakami, who heads up RISO in the UK, commented: "RISO leads the way in the cutsheet inkjet market, innovating and creating stand-out solutions for businesses and organisations.

"We were one of the first to sign up to the original Print Show in 2015, and we know that our attendance helped to attract footfall. It was a positive event for RISO so it makes sense to return.

"Cutsheet inkjet printing has moved on from being a sideshow, or an accessory in the UK's production print sector. We know our devices are being used in tandem with the larger continuous machines, but they are also ideal for and being used for standalone work too.

"The fact they are compact, easy to use, and extremely reliable make them an important tool in the modern printer's armoury, particularly as they also offer low cost printing especially in colour."
