

Press Release

September, 2013

Next-generation inkjet printing solutions launched by Riso UK

The latest in the ComColor series of high productivity, high-speed printing solutions has been introduced into the UK for the first time by leading manufacturer Riso UK.

Designed to provide a cost-effective solution to the diverse needs of printing, the new ComColor X1 series incorporates a range of feed and delivery options that enables users to complete projects in one easy process.

Riso UK Ltd Managing Director Tatsuo Murakami commented: "We are pleased to announce the release of a new lineup of high-speed, full-color inkjet printers that lead their class.

"Due to the ComColor X1s increased versatility and capability, RISO believes that the introduction of the new series will result in it appealing to an even wider market."

Riso UK, the unique and award-winning company that is part of the Tokyo-based Riso Kagaku Corporation, has carried out evaluations that show the new ComColor series prints with low running costs for both colour and black and white that are virtually unmatched by any other devices in its class.

Excellent results are delivered through the use of Riso's unique quick-drying inkjet formulation as it remains stable and permanent on the paper.

Riso's expertise and experience has gone into ensuring that the top of the range ComColor 9150 remains the fastest cut sheet printer in the world, capable of an outstanding high-speed output with up to 150 sheets per minute.

The ComColor X1 series' proven paper feed technology enables smooth operation with most types of uncoated paper from lightweight to heavy stocks and envelopes.

Due to the choice of available controllers the X1 Series can handle print jobs from short runs to large variable data printing when required.

As an innovator in the industry, the high capacity feeder and high capacity stacker options allow for continuous high volume printing with minimal operator intervention.

Efficiency will be further enhanced with introduction of the all-in-one book maker system Perfect Binder and the Wrapping Envelope Finisher, which prints, folds, inserts and seals a completed mail piece.

Murakami continues: "We are delighted that our customers will continue to benefit from all the unique ComColor features including high print speed and incredibly low output cost. As a print and copy solution, for all sectors and print requirements, the ComColor is the leader in its field".
