The Bridge: Where high-speed printing meets highly-efficient inserting

Production printing has evolved to the next level with the introduction of an innovative and unique solution that for the first time fully facilitates ultra-fast colour or mono printing with high-performance inserting in one seamless operation.

Riso UK, with its reputation for delivering ideal solutions to its customers, has partnered with BÖWE SYSTEC to bring to the market The Bridge.

Due to be showcased for the first time in the UK at IPEX, ExCel in March, The Bridge is an integrated print-and-mail solution ideal for hybrid mail applications and immediate reprints, reducing cost and time for short and medium print runs.

Tatsuo Murakami, who heads up the Tokyo-based company in the UK, commented: "The Bridge offers a white paper mailing solution. With its unique inkjet technology, high speed and reliability the Riso ComColor enables The Bridge solution to be a cost effective option for full colour or mono end-to-end mailings."

The integration of the two systems enables users to print documents on demand, on the latest ComColor inkjet printers from Riso, with the use of a white paper solution eliminating waste from out of date stock, saving time and money. The Bridge automates all production steps.

After the mailings have been printed on demand, they are automatically transported to the proven BÖWE SYSTEC Vario inserting system where they are then inserted.

The Bridge is an ideal solution to the processing of hybrid mail, the processing of sensitive documents such as confidential billings, medical documents, administrations and legal documents, all with confidentiality of date assured because no manual intervention is required between printing and inserting.

An optional opaque cover additionally prevents operator visibility and interventions from the outside and therefore guarantees 100 percent integrity.

Waleed Khan, Managing Director of BÖWE SYSTEC UK explained: "The Bridge gives customers much more flexibility in how they manage their print and mailing. It provides them with the power, speed and reliability to produce up to 8,200 finished items in an hour. That's in addition to the print runs they normally do but without the need to add large, expensive print solutions to their systems."

Visit Riso at IPEX 2014 on stand N2-D191 to find out more about The Bridge, the innovative solution for the implementation of a White Paper Factory in the mailroom and production environments.

BÖWE SYSTEC, headquartered in Augsburg, tops the list of European suppliers for high-speed inserting, card mailing and card logistics, reading technologies, mail sorting systems as well as innovative software, pre and post equipment.

Riso is a company dedicated to providing the very best 'ideal' solutions to meeting customers' printing needs. Riso owns more than 1,600 global patents, and this commitment has helped claim a number of industry 'firsts' in full-colour inkjet technologies.
