

PRESS RELEASE

RISO releases the world's first A2 digital duplicator

RISO, the pioneer in digital printing, has just opened up a new stream of opportunities for the print and graphics industry with the launch of the world's first A2 digital duplicator.

Offering high-quality, low-cost, easy-to-use printing, the RISO digital duplicator has become more popular than ever on the professional printing scene.

They are also incredibly popular within the graphics world with art schools and colleges embracing their 'stencil' process which is unique and highly effective.

Previously, A3 had been the largest paper size for printing on digital duplicators but RISO's latest innovation has changed that.

The RISO A2 is equipped with the state-of-the-art technology and is ideal for a wide range of applications in commercial printing including short-run newspapers, flyers and leaflets.

A2 is one of the most commonly used formats in commercial print. RISO's A2 duplicator allows 4 x A4 multi-up printing which saves production time.

The cost-effective master and no costly or expensive pre-press preparation means the larger the number of the copies needed, the lower the printing unit price. This feature enables users to print large quantities at a very low cost.

It also offers high-resolution printing at 600dpi, and can print at a speed of 100 sheets per minute, regardless of the paper size. It is a solution that enables anyone to easily print large quantities both quickly and at a low running cost.

At 1,000 sheets in only 10 minutes, users can deliver on time even when the work has to be done on a tight schedule.

Easy to operate, the RISO A2 is ready to use as soon as it is powered up, and the make-ready time is just 60 seconds. There are 21 standard colours and in addition customers can custom order specific colors, such as their corporate color.

Tatsuo Murakami, managing director of RISO UK, said: "RISO is a pioneer in digital printing, and first made its name across the world with duplicators.

“With the new A2, we have pushed the boundaries and are continuing to challenge the norm.”

And he added: “This latest addition to the portfolio of world-class, innovative devices will open up yet more revenue streams for those in the print and graphics industry who want to offer more to their customers.”
