

PRESS RELEASE

New compact RISO solution in a class of its own

RISO, leaders in print technology, have just launched an A4, high-speed compact solution that is like nothing else in its class.

At 130ppm, with an easy-to-use LCD panel and a range of features including scanning, PC printing and direct USB flash drive printing, the CV3030 delivers sophisticated yet convenient and cost-effective printing for customers.

The CV3030 is the result of customer insight and a focus on continued in-house research and development. It provides the opportunity to save both time and costs without affecting superior print quality.

The CV3030 makes prints from a master. As a result, the more pages generated from each master the lower the cost per print, making it highly economical for medium to high-volume printing.

The speed of printing is up to 130 ppm, which means 500 pages can be printed in less than four minutes.

The paper trays have a capacity of approximately 1,000 sheets for feeding and approximately 800 sheets for receiving, which ensures uninterrupted printing over a longer period.

Tatsuo Murakami, managing director of RISO in the UK, said: "The CV3030 has been designed with the customer's needs first. That's why it is compact, easy to use, and delivers high-quality printing when people need it.

"The LCD panel is clearer to view and easier to operate than ever before, and the inbuilt USB PC interface enables easy connection to a PC. However, people can also print directly from a USB flash drive, which makes it even easier to use."

Changing ink colour is simple yet effective, with the machine's design allowing for quick and easy removal and replacement of the print drum, minimising any potential interruptions.

Mr Murakami added: "RISO has built a worldwide reputation for designing robust, cutting-edge print technology and now we are making that even more accessible for businesses and governmental organisations alike.

“Ideal for schools, universities or businesses where space might be an issue, the stylish and compact CV3030 can change how people print.”

The CV3030 is ENERGY STAR certified, and complies with European directives on energy-related products. It consumes less power and produces no heat unlike photocopiers and laser printers, while the introduction of auto power shut-off and auto sleep functions, the CV3030 supports energy saving.
