

RISO introduces new ComColor FT range

January 2021: LONDON, ENGLAND Global printer manufacturer and distributor RISO has unveiled the latest era in the evolution of its innovative ComColor inkjet printers.

With enhanced productivity and accessories, the new range of ComColor FT models will take over from the existing ComColor FW devices and offer users greater flexibility and the ability to do more, saving both time and money.

The new line-up sees the introduction of the new FT5230, FT5000 and the FT1430 taking the place of previous FW models, with both the FT5000 and the FT1430 having improved speeds to the FW models they succeed.

In addition, the FT range now offers compatibility with an optional additional 2,000-sheet feeder which in effect can double the total sheet capacity of the machines to 4,000 sheets. A feature of this optional feeder is that it can be loaded while the machine is printing meaning people can print continuously without stopping and therefore optimise efficiency.

The all-new FG20 Multifunctional Finisher offers many benefits to the FT users with improved stapling, punching and folding productivity, while its booklet making performance has been enhanced, compared to previous models, to now make the creation of 20 sheet (80-page) booklets possible.

RISO UK managing director Tatsuo Murakami said: "RISO is dedicated to improving and enhancing its offering, ensuring that inkjet printers continue to evolve and provide a trusted print solution."

“The new FT series is a step up, building on the technology that our world-leading research and development teams have been creating for decades, and takes inkjet further, meaning that users can get more from their printers.”

FT model print quality and performance is taken to a new level through the use of new dedicated FT inks offering strong and denser black images.

Added to this, new developments in the FT colours now result in a wider range of printed colour possibilities

As a further enhancement, RISO has extended the already impressive choice of FT model features by adding functions such as Poster Print and Scan Job Build to offer flexibility to the user.

RISO Inkjet printers have always been renowned for reliability and considerable R&D development has been incorporated into the new FT series to ensure world-leading performance.

This has also led to a noticeable reduction in operating noise levels making the FT series both more efficient and quieter than previous models.

Mr Murakami added: “Speed, accuracy, and efficiency are key to ensuring a smooth and effective workflow, and in the new FT range of printers, users can really benefit in their everyday operations. RISO is delighted to be able to continue to innovate for the benefit of customers now and in the future.”
